

Layout and Composition

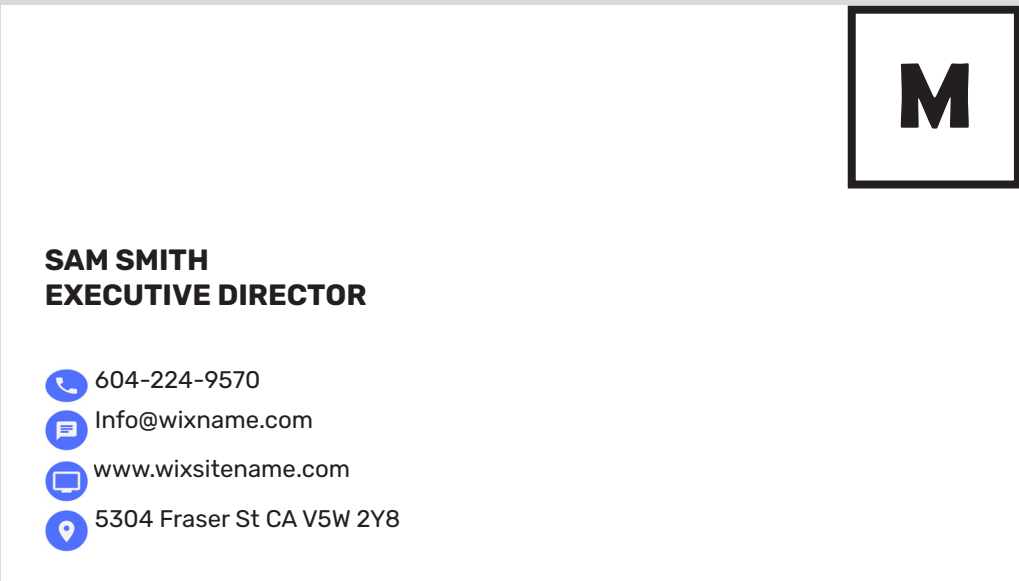

Promixity

Promixity is all about the visual space to show relationships to your content. The relationship make the content group together only from the text or images. The spacing is the important aspect of the line that doesn't attach to each other very close.

White Space

In terms of **White Space** is a component that refer to a “*Negative Space*”, which means spaces are surrounded by the elements that are between to each other.

Alignment

Alignment is something you always need to deal with all the time. Alignment is needed for every other elements because you want to start creating an business card, presentation. It to check if the images are in a spacing between in the prop-grouping is also **and aligned**, with a **equal-sized margins**. Most likely, it will be attention to detail that makes the composition easier to navigate faster.

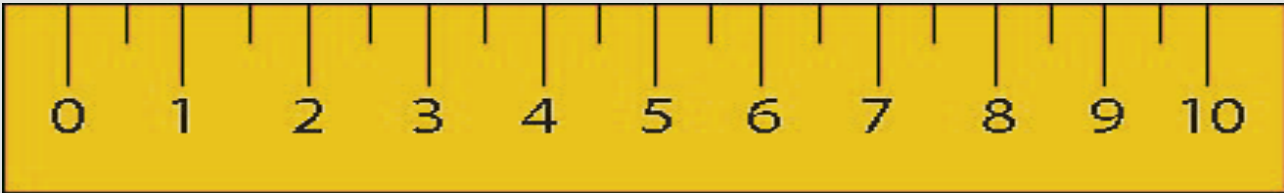

Repetition

Repetition creates a senses of same or similar elements are repeated. Even repetition can be regular or irregular and uneven or even with any kinds of shapes, colors, and sizes. Basically, repetition works similar to pattern as well.

Rule of Grid

The **grid** has different sections of parts. There are parts that uses a grid for column, baselines, and modular. Those grids are specifically used for rules of sizing and spacing that arrange the content into a structured propositions. For example, modular grid is consistency used from horizontal divisions from top to bottom in addition to vertical divisions from left to right. Also, column grid are commonly used to organize the elements into a column.

Modular Grid/Column Grid

Modular Grid			
	Modular grids provide a balanced layout by dividing up your content into equal measures, but the ability to span multiple columns ensures the content appears interesting and dynamic. Modular grids are becoming increasingly popular in web design, often combined with images and bright colors to create a patchwork quilt style layout that neatly presents a large amount of content in a small space.
